Talence, October 2009

Dear Colleagues

In the long history of training and education in Laser technologies at the Bordeaux University, we are now implementing a new concept for Masters, PhD students and engineers at the European level. In the framework of an Erasmus Intensive Program (IP), we are offering to the community an access to a 2 week training course in Ultra-short, ultra-intense laser technology and metrology. USIL.

Tutorials, computer simulations, applications and practice on high tech equipment are organized for the first time in Bordeaux

November 30 to December 11, 2009

Instructors from prestigious European institutions and the Bordeaux team will bring a very high level of education in this field. As an example, this module is included in the Doctoral program of the Bordeaux University.

Due to your involvement in this field and to the quality of your academic institution, you have been selected as a potential partner and thus entitled to send participants free of charge (travel expenses and tuition fees) in a limited number.

You will find attached:

- A detailed program of this action
- A poster you may use for advertising among your community

As the manager of this action, I will be happy to give more input on this program.

Administrative information can be found:

- On our website: <http://www.pyla-routedeslasers.com/Intensiveprogram>
- Or at the following address: aycoberry@adara.fr

We sincerely hope you will join this effort in higher education.

Best regards

Laurent SARGER
